## **PROFESSIONAL MOUNTING SYSTEMS** FOR PV PROJECTS

**From rooftop systems to ground-mounted structures, carports, and trackers — Photomate selects the best-fit construction technology for your project needs.**

### **01. EU Suppliers**

Only verified and audited suppliers from EU to diversify supply chain and final offer

### **02. Dedicated team**

Dedicated Structure Division with experienced team to ensure support on-site and at any time

### **03. Revenue focus**

Absolutely the best solution to obtain maximum revenue for final investor to build long term trust

### **04. Cost efficiency**

Best value for money thanks to Photomate scale effect

### **05. Technical accuracy**

Double checked technical accuracy for designated area and weather/ ground/ terrain conditions

### **06. Tailored solutions**

Each project is individually designed with selected suppliers to save customer time and optimize results.

## Offered solutions

### Ground structures

When it comes to utility-scale PV projects, the structure is not just steel – it's the foundation of long-term ROI.

At Photomate, we offer ground-mounted solutions tailored to real site conditions:

- Rammed or ground screw foundations
- Double support and monopile options
- Adapted to terrain, soil, and weather conditions

**Every design is double-checked for technical accuracy, ensuring reliability and performance over decades.**

### Rooftop

Not all roofs are created equal – and neither are PV structures.

Our dedicated rooftop solutions are designed with full engineering responsibility:

- Static calculations included
- Ballast reports for flat roofs
- Solutions for both flat and pitched roofs

**We make sure your installation is not only efficient, but also safe, compliant, and optimized for each building.**

### Carports

Carports are no longer optional – they are becoming a standard driven by EU regulations.

At Photomate, we deliver flexible PV carport solutions for every use case:

- Industrial (Y-shape / L-shape designs)
- Residential options with fixed dimensions
- Budget-friendly adjustable systems

**Designed to combine energy generation + functionality + aesthetics.**

### Trackers

Want to maximize energy yield? Fixed tilt is just the beginning.

Our tracker solutions are built to follow the sun – and your project needs:

- Adapted to different terrains and slopes
- Optimized for higher energy production
- Suitable for large-scale installations

**We also support advanced applications like Agro-PV, combining energy generation with agricultural use.**
